

## What is our study about?

We study a new investigational treatment for superficial basal cell carcinoma (sBCC) as alternative for surgery, currently the most common treatment for sBCC.

## You may qualify if you:

- Are older than 18 years.
- Have one or more eligible sBCCs.
- You are willing to undergo up to 4 photodynamic therapy (PDT) sessions at up to 8 visits within the clinical phase extending over up to 7 months plus a 5 year follow up.
- Are willing to have at least one sBCC removed in a little surgery after the clinical phase.

## What will be your benefit if you participate?

- Your participation supports the medical knowledge and may help people with sBCC in the future.
- Your participation may be compensated.
- You will not incur any costs by participating.

## Where can I get additional information?

- Information about the study: 1-781-245-1325
- Biofrontera and our products: [www.biofrontera.us.com](http://www.biofrontera.us.com)
- From your doctor:
